

Spazio Theme Project Report

Date: 2026-03-24

Repository: <https://github.com/hamzabread/spazio>

Workspace analyzed: /Users/hamzaelahi/Downloads/spazio-pitch-multi

1) Executive Summary

This project is a custom Ghost theme for Spazio Crypto, based on Pitch and heavily extended with custom templates, modular CSS, multilingual support, and custom content sections. The codebase is in active development and currently runs locally with Ghost 6.21.0.

Recent implementation work focused on:

- Responsive behavior and layout polishing.
- Footer information architecture updates (left/right column grouping, trending sectors placement).
- About page pixel-precision updates (spacing, typography, breadcrumb styling, social icons with custom SVGs).

Current quality status from theme validation:

- 1 error (unknown Ghost global helper).
- 4 warnings (deprecated social helpers, custom font support warning, and ``limit="all"`` usage).

2) Tech Stack and Build System

- Platform: Ghost theme (Handlebars templates + static assets).
- Templates: `.hbs`` files in root and ``partials/``.
- Styles: modular CSS in ``assets/css/``.
- JavaScript: theme scripts in ``assets/js/``.
- Bundling: Rollup (``rollup.config.js``).
- Build output: ``assets/built/``.
- Package manager in this repo: npm scripts (with lockfile present).

Key npm scripts:

- ``npm run dev`` -> watch mode build.
- ``npm run build`` -> production build.
- ``npm run test`` -> Ghost theme scan (``gscan``).
- ``npm run zip`` -> package theme zip.

3) Codebase Structure (High Level)

- Root templates: homepage, post/page, tag/author, custom templates.
- ``partials/``: reusable UI fragments (header, footer, cards, feeds, widgets, language controls, etc.).
- ``assets/css/``: section-based styling (home, post, footer, forms, about, breadcrumbs, etc.).
- ``assets/js/``: UI behavior scripts.
- ``locales/``: language translations (``en``, ``it``, ``es``, ``fr``, ``de``, ``ja``, ``ko``, ``ru``, ``zh``).
- ``assets/built/``: generated, bundled assets consumed by Ghost.

4) How to Run Locally

Prerequisites

- Ghost local install exists at ``/Users/hamzaelahi/Downloads/ghost-local``.
- Node version for Ghost 6.21.0 should be Node 22.x (validated with Node 22.22.1).
- Theme source at ``/Users/hamzaelahi/Downloads/spazio-pitch-multi``.

Run sequence (recommended)

1. Build theme:

```
cd /Users/hamzaelahi/Downloads/spazio-pitch-multi  
npm run build
```

2. Deploy theme into Ghost:

```
rsync -a --delete /Users/hamzaelahi/Downloads/spazio-pitch-multi/  
/Users/hamzaelahi/Downloads/ghost-local/content/themes/spazio-pitch-multi/
```

3. Start/restart Ghost with Node 22:

```
export NVM_DIR="$HOME/.nvm"  
[ -s "$NVM_DIR/nvm.sh" ] && . "$NVM_DIR/nvm.sh"  
nvm use 22.22.1  
cd /Users/hamzaelahi/Downloads/ghost-local  
ghost restart
```

4. Verify status:

```
ghost status
```

5. Open site:

```
- `http://localhost:2368/`
```

Notes on runtime issues resolved

A startup failure occurred previously (`Cannot read properties of undefined (reading 'members')` with `ERR\_REQUIRE\_ESM`) when Ghost was started from Node 16. Switching Ghost runtime to Node 22 and reinstalling dependencies in the Ghost version directory resolved the issue.

5) What Has Been Done

A) Responsive and layout improvements

- Main-page responsiveness refinement across desktop/tablet/mobile flow.
- Footer restructured into logical left and right groups for better alignment and spacing behavior.
- Trending sectors block placement adjusted beneath primary category columns as requested.

B) About page pixel-perfect pass

Implemented a design-focused update for the about hero section:

- Hero horizontal padding updated.
- Hero card switched to flex layout with cleaner spacing behavior.
- Breadcrumb spacing and typography tuned to design values.
- About chip restyled (spacing, border, radius, color/opacity).
- Hero title and body typography adjusted.
- Social icon row spacing refined.
- Hero image border radius updated.
- Social icons replaced with custom SVGs.

Additional follow-up updates:

- `.sc-about-hero-copy p` given `margin-bottom: 18px !important`.
- Margin/padding removed from `.sc-about-hero-copy`.
- `.sc-about-hero-copy` constrained to `max-width: 644px; width: 100%`.
- Width removed from `.sc-about-shell`.

C) Process hardening

- Adopted a consistent post-change workflow: build -> rsync deploy -> ghost restart.
- Local Ghost verified running after environment correction.

6) Current Validation Status

`gscan` result (latest run):

- Errors: 1
- Warnings: 4

Open error

1. Unknown global helper

- File: `partials/content-grid.hbs`
- Issue: uses unsupported Ghost global helper `{{@second}}`.
- Impact: should be fixed for full Ghost 6 compatibility.

Open warnings

1. Deprecated helper: `{{twitter\_url}}`

- Files include: `author.hbs`, `page-about-us.hbs`, `page-about.hbs`, `partials/footer.hbs`, `partials/mobile-menu.hbs`, `partials/socials.hbs`
- Replace with: `{{social\_url type="twitter"}}`

2. Deprecated helper: `{{facebook\_url}}`

- Same file set as above.
- Replace with: `{{social\_url type="facebook"}}`

3. Missing custom font variable support

- Style warning for missing Ghost custom font CSS vars:
 - `--gh-font-heading`
 - `--gh-font-body`

4. `limit="all"` usage no longer fully supported in Ghost 6

- Files: `custom-archive.hbs`, `custom-memberships.hbs`
- Suggestion: switch to explicit limits and/or pagination strategy.

7) What Is Left (Recommended Backlog)

Priority 1 (compatibility and correctness)

- Replace unsupported `{{@second}}` usage in content grid partial.
- Migrate deprecated social helpers (`facebook\_url`, `twitter\_url`) to `social\_url` helper.

Priority 2 (theme standards)

- Add Ghost custom font CSS variables for heading/body support.
- Remove `limit="all"` and implement robust pagination behavior.

Priority 3 (quality and maintainability)

- Add a lightweight project README for local setup and deployment workflow.
- Add a checklist for visual QA across breakpoints and key templates.
- Optionally add pre-commit validation (`npm run build` + `npm run test`).

8) Suggested Implementation Plan

Phase 1: Ghost 6 compatibility cleanup

- Resolve the one hard error (`{{@second}}`).
- Replace deprecated social helpers everywhere.
- Re-run `npm run test` until zero errors.

Phase 2: Theme behavior and polish

- Replace `limit="all"` paths with explicit query+pagination behavior.
- Add missing Ghost font CSS vars.

Phase 3: Process/documentation

- Add contributor runbook (`README.md`) with known-good Node version and commands.
- Add release checklist (build, scan, package, smoke test).

9) Operational Commands Cheat Sheet

Build:

```
cd /Users/hamzaelahi/Downloads/spazio-pitch-multi && npm run build
```

Scan:

```
cd /Users/hamzaelahi/Downloads/spazio-pitch-multi && npm run test
```

Deploy:

```
rsync -a --delete /Users/hamzaelahi/Downloads/spazio-pitch-multi/  
/Users/hamzaelahi/Downloads/ghost-local/content/themes/spazio-pitch-multi/
```

Ghost restart (Node 22):

```
export NVM_DIR="$HOME/.nvm"  
[ -s "$NVM_DIR/nvm.sh" ] && . "$NVM_DIR/nvm.sh"  
nvm use 22.22.1  
cd /Users/hamzaelahi/Downloads/ghost-local && ghost restart
```

Status:

```
cd /Users/hamzaelahi/Downloads/ghost-local && ghost status
```

Prepared for project tracking and handoff.
